

#### TOP PERFORMANCE IN ALL SITUATIONS.

The Balance slope compensation feature ensures top performance without losses in all situations, A constant threshing performance, a high degree of comfort and reliable threshing under hillside conditions with lateral slopes of up to 20% and uphill/downhill gradients of up to 6 %.

### WHERE WORK IS FUN.

Best view to the front and side, significantly more space, optimum ergonomics of the operating elements - the new CommanderCab III is a workplace with maximum driving and operating comfort.

#### **EVERYTHING UNDER** CONTROL.

Machines with TERIS/TCS are equipped with an automatic machine pre-setting (AMV) for concave settings, threshing drum speed, turbo-separator clearance, fan speed and sieve opening.

#### MORE THAN THOROUGH.

The threshing section satisfies the highest demands. The threshing unit provides an extremely high throughput and efficiency; maximum grain separation is already performed in the concave.

## **OPTIMUM ADJUSTMENT**

Intake and discharge of the concave are separately and electrically adjusted. This ensures optimum adjustment to suit all types of crop.

# The new DEUTZ-FAHR 6-walker generation stands for dynamics, economic efficiency, state-of-the-art technology, elegance. These are premium class combines which catch the eye - and not only because of their future-oriented technical

features. 5670 H/HTS, 5680 H/HTS and 5690 HTS - for farmers and contractors with the highest demands regarding technical and comfort standards.

The new premium harvester with decisive extra benefits:

- Exemplary CommanderCab III cabin with a larger glazed area, providing generous freedom of movement and ultimate ergonomy for a stress-free workplace.
- High-efficiency cutting table with a working width of up to 7.20 m for maximum threshing power.
- Feeder channel with central locking system for easy operation of the cutting table.
- Supreme tangential threshing section for maximum grain separation efficiency in the concave.
- Engines from 190 kW/260 hp, air-cooled, up to 206 kW/280 hp and 235 kW/320 hp, liquid-cooled for supreme performance under all load conditions.
- Excellent accessibility for maintenance and service work to save time.

The new premium class combine harvesters naturally provide all important performance characteristics which have already proved their worth all over the world in the TOPLINER class. These include the Balance feature for operation under hillside conditions, the high performance cross-flow lateral fan and a grain tank volume of up to 8,500 litres.
